STATEMENT ON CALIFORNIA PROPOSITION 65
Zettlex IncOder Range of Products (all part numbers)

Under the California Safe Drinking Water and Toxic Enforcement Act of 1986 (known as Proposition 65 or 'Prop 65'), the State of California creates and updates annually a list of substances known by the State of California to cause cancer or reproductive toxicity ('Prop 65 List'). Prop 65 requires 'clear and reasonable' warnings to be given if, in the course of doing business, a person knowingly and intentionally exposes an individual in California to a substance on the Prop 65 List. Prop 65 also prohibits knowingly discharging or releasing a substance on the Prop 65 List such that it is likely to, or will, enter any California drinking water source. Zettlex products are not intended to expose any person to any substance on the Prop 65 List during normal product use. Accordingly, the Prop 65 'clear and reasonable' warnings requirements do not apply to Zettlex products. As a result, products do not include warnings specifically related to Prop 65 or the Prop 65 List substances and Zettlex does not make available a specific list of Prop 65 List substances that may be contained in our sensor products. Notwithstanding the foregoing, Zettlex reviews its suppliers' certifications, material datasheets, and disclosers of substances and materials. Based on this third-party information, Zettlex has determined to the best of its knowledge and belief that certain Zettlex products may contain one or more of substances on the Prop 65 List. If present, these substances are not intended to be exposed to users, nor are they intended to be released or discharged during normal product use. If after review of available material content information and our products we determine an exposure requiring a Prop 65 warning may exist, Zettlex will provide the necessary "clear and reasonable" warning. Zettlex continues to take reasonable steps to acquire representative and accurate information that may in some, but not all, cases include the use of destructive testing or substance analysis on incoming materials and substances and update its material content information accordingly. Zettlex also updates material content information as new requirements are identified. Zettlex and its suppliers may consider certain information to be proprietary and, therefore, Substance Abstracts Service numbers and other information may not be available for release.

Applicable local regulations and directives regarding the disposal of electrical and electronic equipment should always be consulted.
